

ABSTRACT

APPARATUS AND METHOD FOR REMOVING SOLVENT RESIDUES

In the field of biomass extraction, there is a need for effective removal of
5 solvent from spent biomass material.

An apparatus for removing solvent residues includes a vessel (11) for containing
biomass; a steam source (19) for supplying steam to contact the biomass; and a
separator (24) for separating solvent from steam that has contacted the biomass.

10

The disclosure includes a method of use of the apparatus.
